1. Syllabus and Textbook
The Department of Mathematics and Statistics chooses the textbook and makes out a syllabus for the course.
The textbook is the sixth edition of *Vector Calculus* by Marsden and Tromba, published by Freeman, 2012, ISBN 978-1-4292-1508-4. A general syllabus is posted on the Mathematics Department web site; a detailed syllabus is posted on the class page.

2. Grading
Your grade will be computed from two components, weighted as shown.

1. In-class exams [1/2]. As indicated in the syllabus, there are three in-class exams spaced approximately 1/3, 2/3, and all the way through the semester. The specific date of each exam will be announced a class period or two in advance. There are no substitute or make-up exams: if you miss an in-class exam for any reason except a bona fide disability or a religious observance as discussed in the paragraph at the end of this file your score on the final exam will be substituted for the missing exam score.

2. Final exam [1/2]. The final exam is one that I will make out and will cover everything in the syllabus. It is scheduled for Thursday, December 13, 2:00–4:30 pm.

The grading scale is 90% for an A, 80% for a B, and cut-offs for the grades of C and D that depend on the performance of all students in the class.

3. Attendance and classroom standards.

1. Attendance is not taken and does not figure into the computation of your grade. How often you attend is up to you.

2. The only classroom standard is that you not disturb other students who are trying to learn. Chronic departure from this standard will result in a grade penalty.
4. Additional comments.

1. *No make-up exams.* You must take each regularly scheduled exam at the announced exam period or not at all, even if you have a good reason for being absent, such as participation in a university sponsored event, except in the case of a bona fide disability or a religious observance as discussed at the end of this file.

2. *Technology.* Calculators are not allowed.

3. *Communication by email.* Announcements are sent to your name@uncc.edu email address. The class is run on the assumption that you read this mail daily.

4. *Students with disabilities.* If you have a disability that impinges on your ability to take this course in the manner described above, then typically accommodation can be made. All such accommodations are handled in conjunction with the Office of Disability Services. You should contact them immediately if you have such a disability.

5. *Religious Observance Law.* By North Carolina law a student is allowed two excused absences each academic year for religious observances. A student may take an in-class exam early if he informs me in advance, in writing, of a religious observance that prevents his taking an in-class exam at the scheduled time. By university policy this must be done by the census date for the semester, in this case Friday, August 31.
